Phase behaviour of the PSM GCM and GEM-*n* models Studied the softmatter physics with Monte Carlo

Yun-Hsuan Chou

¹Department of Pysics National Taiwan University

Final Porject, 2016, 06, 26

Outline

- Introduction to the Monte Carlo Method
 - ullet Demo calculate π
 - Demo calculate 2-D classical Ising model
 - Calculate L-J particles in the NVT-ensemble
- Introduction to the models for describing the phase behaviour
 - Penetrable Sphere Model (PSM)
 - Gaussian core Model (GCM)
 - Gaussian exponential Model (GEM-n)
- Results

• Define a domain of the target.

$$p(x,y) = \begin{cases} 1 & \text{, } x^2 + y^2 \le 1 \\ 0 & \text{, otherwise} \end{cases}$$
 (1)

• Generate random numbers (x_i, y_i) from uniform distribute [-1, 1].

$$p_i = 1 \text{ if } x^2 + y^2 \le 1; \ p + i = 0 \text{ otherwise}$$
 (2)

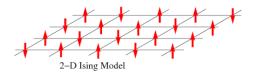

$$\pi \approx \frac{1}{N} \sum_{i=1}^{N} \rho i + O(1/\sqrt{N}) \tag{3}$$

Demo - calculate π

Phase behaviour of the PSM GCM and GEM-

Demo - calculate 2-D classical Ising model

 Build the configuration of a 2-D square lattice and set spins on each site. [Fig. 7]

$$H = -J\sum_{i \neq j} \sigma_i^z \sigma_j^z \tag{4}$$

$$\Psi = |\sigma_1, \sigma_j, \cdots, \sigma_N\rangle \tag{5}$$

Calculate the probability of the configuration at time t:

$$P(E,t) = e^{-\beta E(C)}$$
, where $\beta = \frac{1}{k_B T}$ (6)

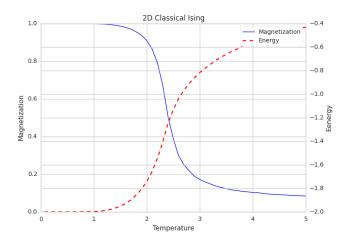

Demo - calculate 2-D classical Ising model

• Importance Sampling: Metropolis algorithm Choose a spin randomly and determined that if it should be flipped to a new configuration C^\prime

$$\Delta E = E(C') - E(C)$$

$$\Delta E < 0$$
: accept filp
$$\Delta E > 0 = \begin{cases} \text{accept } C', \text{ if } e^{-\beta \Delta E} \geq \text{random number} \\ \text{reject } C', \text{ otherwise} \end{cases}$$

Demo - calculate 2-D classical Ising model

Calculate L-J particlas in NVT ensemble

- Initialize a molecular configuration:
 In this case, we can set the atoms in the cubic sites.
- Determined the Trial move:
- Importance Sampling: Metropolis algorithm
- Repeat until the energy converge.

Introduction to the models for describing the phase behaviour
